College of Science

In Fall 2012, California State University, Stanislaus merged programs from two previous colleges to form a new College of Science (COS). The College of Science is now composed of a variety of degree programs in Biological Sciences, Chemistry, Child Development, Computer Science, Geology, Mathematics, Physical Sciences, Physics, Psychology, and Nursing. The COS Departments form a scientific community dedicated to providing students the intellectual and technological capacity to contribute to and succeed in their academic and scientific pursuits. Our School of Nursing is a state-of-the-art school that provides our students with practical knowledge and experience necessary for the field of Nursing.

Graduates of these disciplines will demonstrate the highest ethical standards in both research and practice and will exhibit sensitivity, altruism, autonomy, integrity, social justice, and competence in their practice with economically and culturally diverse populations.
