				Selected Topics course. Students will acquire a measure of perspective regarding the chemical behavior of simple substances by having a laboratory experience to observe chemical reactions. Each student will work on qualitative analysis of cations and anions and will be trained in inorganic descriptive chemistry. The students will be exposed to many properties of ions, observe many different compounds, which they prepare by many different reactions, and learn to write equations of these reactions. This experience will make the study of chemistry more pleasant and introduce some of the atmosphere that is present in chemical research by the use of unknowns.

				Selected Topics course. Provides an examination of psychological concepts in contemporary and historical film, with a focus on mental health, relationships, and the impact of popular film on society. Topics include personality, psychopathology (schizophrenia, dissociative disorders, substance abuse, depression, suicidal ideation), mental health treatment, memory, family dynamics, and accuracy in the depiction of psychological distress. Students will gain the ability to critically evaluate the portrayal of mental illness and abnormal behavior in film. Readings and lectures are connected to examined films. Topics covered will also include developmental, gender, and multicultural issues represented in film. Students will learn by participating in lectures and group discussions, viewing films, reading articles, and completing assignments.
